AN AMYNTA COMPANY

# Beacon Navigator 2.0

## Something big is landing in December 2026.

*A faster, smarter way to quote, bind and service aviation business with Beacon.*

### Rebuilt from the ground up for our brokers

Navigator 2.0 is a complete modernization of the Navigator portal you use today. Every workflow you rely on (quote, bind, endorse, renew and cancel) carries forward on a faster, more secure platform designed around the way your agency works.

### What's coming your way

| Enhancement | What it means for you |
|---|---|
| **Guided quoting** | A clear, step-by-step flow from program and aircraft through pilots and review, with premiums recalculating in real time as you adjust coverage. |
| **N-Number and insured lookup** | Enter a tail number and aircraft and ownership details populate automatically from FAA registration data. For new purchases where FAA data is not yet updated, aircraft ownership fields provide a lookup tool for your agency's current insured data within the Navigator database. Less re-keying, fewer errors. |
| **Alternate quote options** | Quote higher liability limits or other alternates alongside the primary option so your client can compare and choose. |
| **Your agency dashboard** | Active quotes, bound policies, pending items and agency metrics at a glance. |
| **Global search** | Find any quote, policy, insured, aircraft or agent from a single search bar. |
| **Documents on demand** | Download quote proposals, declarations, certificates of insurance and invoices anytime, with full certificate history. |
| **Reporting and export** | Agency statements that separate new and renewal commissions, expiring-policy reports, and CSV or Excel export. |
| **Proactive alerts and security** | Email notifications on quote status, binding, notices, invoices and renewals, protected by multi-factor sign-in. |
| **Direct API connectivity** | A modern RESTful API with real-time webhooks lets your systems quote, bind and service new AND renewal policies with Beacon in your own system without re-keying. |

### Get ready for takeoff

All active Navigator users, quotes and policies along with historical policy records will automatically roll over to 2.0 on our launch date. Watch your inbox in the coming weeks for launch timing, training sessions and sign-in details. Agencies interested in system-to-system integration can request our Broker Integration Guide today. Questions? Contact your Beacon underwriter or call us at 941-256-7307.

*Features described are planned enhancements and subject to change prior to release.*
